

Lettero Crane

Photopolymer die storage system

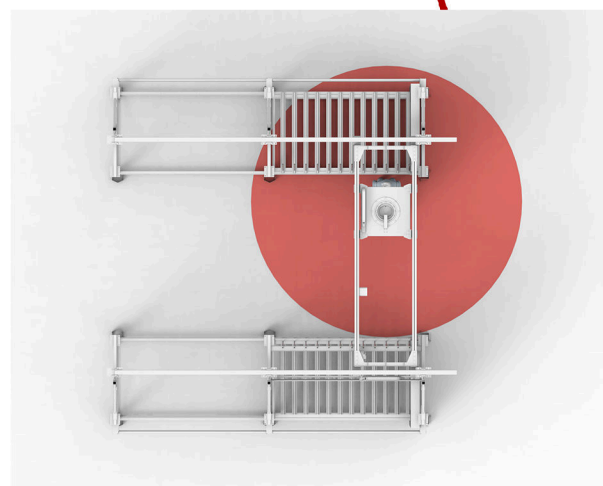

The stacker crane system is made for storing flat dies on Lettero storage racks.

It's a modern solution, consisting of racks with guides, cassettes for the flat dies, as well as cassette handling stacker.

The cassette handling stacker is a manually operated crane.

Thanks to the use of an ergonomic control panel and monitoring cameras, our product provides easy and safe access to all storage levels from the operator's position.

The stacker crane system:

- Saves your space and time
- Provides archiving convenience
- Ensures an appropriate level of security: both for operators and load

Lettero Cassettes

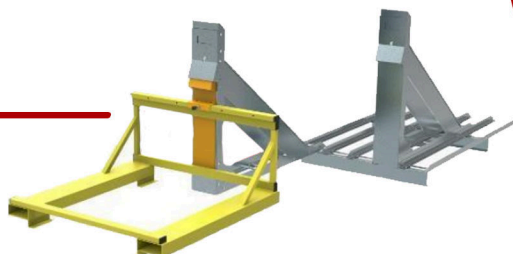

4 sizes available:

Symbol	SxGxW
Kaseta K1	170X1600X1200
Kaseta K2	170X1250X100
Kaseta K3	170X1050X90
Kaseta K4	170X800X650

The flat die cassettes can also be stored on smaller Lettero storage racks.

For this solution, we propose to use forklift, equipped with our Lettero adapter.

A convenient addition to the Lettero crane is a transport rack.

The transport rack is designed to safely transport the cassettes between the warehouse and the production line.

In addition, we can equip the Lettero crane system with **PW15** or **PW20** hanger panels for photopolymers.

Our hanger panels are coordinated with the type of photopolymer fastening, which ensures the convenience and safety of the storage.

PW20

PW15

The Lettero Crane has been designed for the flexible organization of warehouse storage space in the most efficient, convenient, and safe way.

Our rack system allows you to store various types of printing forms in endless combinations.
